                    GENERAL INFORMATION:

APPLICANT: Pagano, M.

TITLE OF INVENTION: METHODS TO IDENTIFY COMPOUNDS USEFUL FOR THE TREATMENT OF

TITLE OF INVENTION: PROLIFERATIVE AND DIFFERENTIATIVE DISORDERS

FILE REFERENCE: 5914-090-999

CURRENT APPLICATION NUMBER: US/10/042,417

PRIOR APPLICATION NUMBER: 5002-01-07

PRIOR APPLICATION NUMBER: 60/260,179

PRIOR FILING DATE: 2001-01-5

PRIOR FILING DATE: 2001-01-5
NUMBER OF SEQ ID NOS: 89
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

On Apr 30, 2001 this sequence version replaced gi:13751877. On Apr 30, 2001 this sequence version replaced gi:13751877. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; SW:, EMPRENT: THE PREMENT OF THE PROPRIEST OF THE PROPR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    On Apr 14, 2001 this sequence version replaced gi:13443296. During sequence assembly data is compared from overlapping clones Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Direct Submission

NOTE: This is a 'working draft' sequence. It currently consists of 46 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a 'working draft' sequence. It currently consists of 62 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                       18:

ALIGNMENTS

```
for coating artificial surfaces, since use of Saratin renders them

CC non-adhesive for cells and prevents the activation of cells. It may also

CC be used for coating natural collagen surfaces. Furthermore, Saratin is

CC useful for modifying intraocular lenses in order to lessen the

CC thrombogeneatty of the lens material, for contacting the lens surface, or

CC is used for refractive anterior or posterior chamber ocular implants,

CC which may be implanted into the eye. This new type of coating avoids

CC medicaments that are for instance conferring cell death, Saratin coating

CC entibody immunospecific for Saratin, as well as Saratin itself, are

CC useful for measuring samples derived from host cell cultures or from a

CC creating metrin cortain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-SEP-2000.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200056885-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        encoding Saratin, an expression vector comprising the DNA sequence, a host cell transformed with the expression vector, antibodies immunospecific for Saratin, and methods for identifying Saratin agonists or antagonists. Saratin is useful for treating thromboembolic processes, and for manufacturing a medicament for treating thromboembolic diseases. It is useful for preventing thrombotic diseases. Saratin is also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Saratin is a protein isolated from the saliva of the medicinal leech Hirudo medicinalis. Saratin is an inhibitor of collagen-dependent platelet adhesion. The invention includes polynucleotide sequences

This sequence represents the cDNA encoding the immunophilin FKBP46 from the moth Spodoptera frugiperda. FKBP46 is a novel insect cell nuclear immunophilin, which can be used to study and identify additional immunosuppressive drugs that bind to it. Such immunosuppressive agents can be used in treating transplant and tissue graft patients.
                                                                                 Isolated immunophilin FKBP46 nucleic acids - useful for developing products for the study and identification of immunosuppressive agents for treating e.g. transplant and tissue graft patients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New protein to inhibit collagen simulated platelet aggregation extracted from salivary gland of Haementeria officinalis for treating thrombotic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                When cloned into the yeast expression vector pKH4a2, the sequence forms a fusion product of MAF-alpha-1 leader sequence plus LAPP, which when produced are proteolytically processed by the Lys-Arg cleaving endopeptidase (KEX2), which cleaves on the C terminal side of Lys-Arg, and the products secreted into the culture medium. The LAPP gene was isolated from a leech lambda GT22 cDNA library prepared from total leech salivary gland RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 441 BP; 134 A; 99 C;

The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic CD DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one can and the degree of hybridisation to both classes is determined from the two classes of oligomers, the degree of methylation is calculated. The method CC lasses of oligomers, the degree of methylation is calculated. The method CC is used: (1) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory cystems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation. The method allows the compliant (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the control of the cantral represent genomic DNA sequences used to illustrate the central for determining the degree of cytosine methylation described in the disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert CC genomic sample of DNA. The sample is treated chemically to convert CC provided to the convert CC provided to the part of the genomic CC The amplicon is hybridised to to uracil, then part of the genomic CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide CC types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

CC method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                           Alignment Scores:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                  AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the production of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral-shaped bacteria called Spirochetes, spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         03-SEP-1997;
